# BOOMER-S

The model "Boomer" is based on a new hooking to the car mirror. It has been especially projected for the convex-shaped mirrors.

The Boomer-S, has the following characteristics:

- the straps are fixed in the mirror with the help of three silicon discs; these discs prevent the straps from slipping off ;

- we have added a adjustable strap, that helps to fix our mirror to the most difficult mirrorhead.

The « **Boomer-S** » line has 4 models, depending on the glass.

Standard (white glass):

- **S025:** Boomer-S with plan standard glass;
- **S026:** Boomer-S with convex standard glass.

Deluxe (blue tinted-glass):

- **S027:** Boomer-S with plan blue-tinted glass;
- **S028:** Boomer-S with convex blue-tinted glass.

It is supplied in a 2 piece kit.

Vibration resistant

# BOOMER-S

## LONG ARM

The mirror of the « Boomer-S » line can be equipped with the long arm. The long arm is necessary only if the caravan is very wider than the car.

The long arm is recommended when the caravan is wider than 235 cm; it is always recommended when the difference between the caravan and the car overcomes the 48 cm.

With the long arm the item has the same code + " / L " :

- S025/L - S026/L - S027/L - S028/L

It is supplied in a 2 piece kit.

## MAGNETIC SUPPORT ANTI-VIBRATIONS

The mirror of the line « Boomer-S / L » can be equipped also with the magnetic anti-vibrations arm (code 2492). The result is very appreciated by the drivers of multipurpose motor vehicles on uneven ways. Also crossing vehicles of great dimensions, like the “road-trains”, the effect of the movement of the air is well prevented by the “Big Red.”

The « Boomer-S / L » with the magnetic anti-vibrations arm have the following codes::

**S071:** S025/L + magnetic support;

**S072:** S026/L + magnetic support;

**S073:** S027/L + magnetic support;

**S074:** S028/L + magnetic support;

It is supplied in a 2 piece kit.
